

RetailPAY

Nationwide Payment Solutions

Our hosted payment engine, *RetailPAY*, allows third party software companies, developers, and POS resellers to seamlessly integrate their software application to handle electronic payment transactions without requiring the payment application to transmit or store cardholder data.

How Our Payment Engine Works

- Eliminate the need to validate PA DSS
- Supports Convenience Fee models
- Process/Reconcile credit cards and electronic checks
- Customizable user interface to match the look of your own application
- Multiple user defined data fields that can be passed back to your application
- Reconcile ecommerce and over-the-counter transactions via a single reporting system
- Customizable shopping cart capabilities
- Options for direct API integration
- Supports real-time data base integration/web services
- Level 2 processing capabilities

	RetailPAY Payment Engine	RetailPAY API
POS Company PA DSS Validation Required	Not Required	Yes
POS Company Cardholder Data Transmission & Storage	None	Optional
